Number Patterns

Explanation:

- Number patterns are numbers that repeat in a special order.
- We can guess the next number by looking at the repeating pattern.
- Number patterns help us learn counting better.

Examples with Solutions:

- 1. Simple Counting:
 - 1, 2, 1, 2, __?

Solution: 1 (Numbers 1 and 2 repeat)

2. Counting by Twos:

2, 4, 6, 8, __?

Solution: 10 (Adding 2 each time)

3. Repeating Threes:

3, 3, 6, 6, __?

Solution: 3 (Pattern repeats after every two numbers)

4. Counting Backwards:

5, 4, 3, __?

Solution: 2 (Counting down by 1)

5. Skip Counting by Fives:

5, 10, 15, __?

Solution: 20 (Adding 5 each time)

Summary Points:

- Number patterns repeat numbers in a special way.
- Patterns help us find the next number easily.
- Practicing number patterns makes counting and math easier.
