

What does Air Contain?

What Does Air Contain?

Air is all around us, but we cannot see it. Even though it looks empty, air contains many things.

i. Oxygen

- It helps us breathe.
- Animals and humans cannot live without it.

ii. Carbon Dioxide

- Plants use it to make their food.
- We breathe it out.

iii. Nitrogen

- It is the most in the air.
- It helps plants grow.

iv. Water Vapour

- It is water in the air.
- It forms clouds and rain.

v. Dust Particles

- Sometimes, air has dust and smoke.
- That's why we should keep our air clean.

vi. Germs

- Dirty air can carry germs that make us sick.
-
